

XKSSF4-10PY

4x100 Gbps QSFP-DD LR 10 km
SMF Optical Transceiver

Features

- QSFP-DD MSA compliant
- Parallel 4 optical lanes
- 100G Lambda MSA 100G-LR Specification compliant
- Up to 10 km transmission on single mode fiber (SMF) with FEC
- 8x53.125 Gb/s electrical interface (400GAUI-8)
- Data rate 106.25 Gbps (PAM4) per channel
- Maximum power consumption 12 W
- MPO-12 connector
- Single +3.3 V power supply
- RoHS compatible
- Operating case temperature 0 °C to +70 °C (Standard)

Applications

- 400G Ethernet
- Infiniband Interconnects
- Datacenter Enterprise Networking

Description

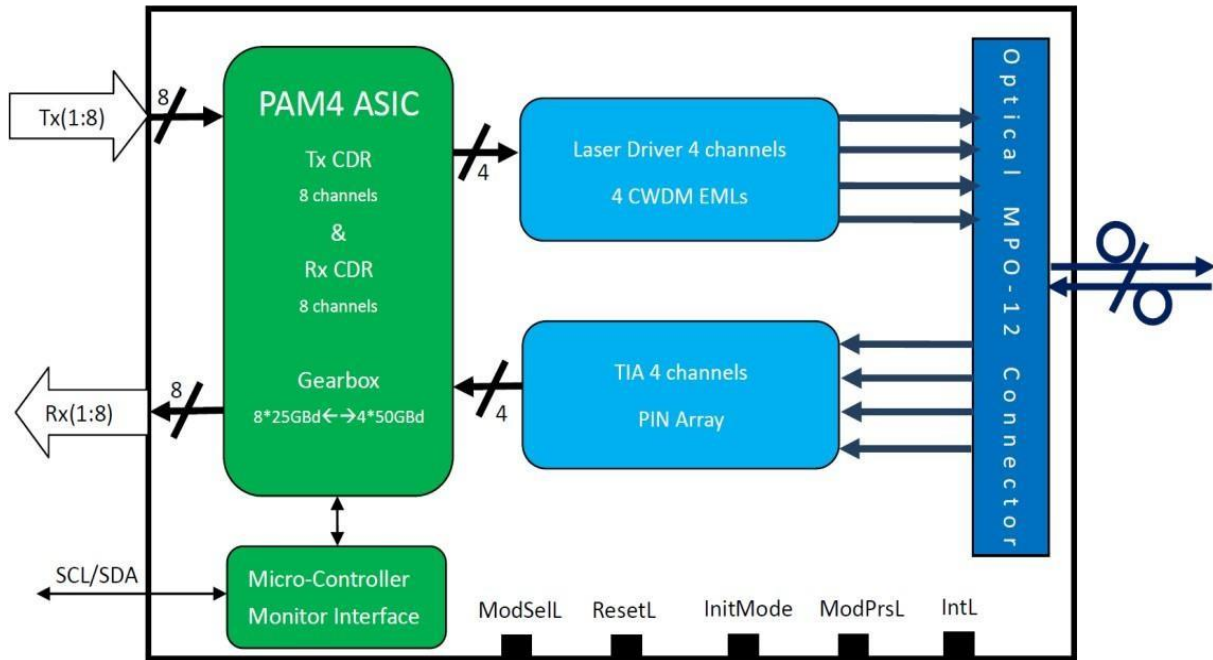

This product is a 400 Gb/s Quad Small Form Factor Pluggable – double density (QSFP-DD) optical module designed for 10 km optical communication applications. The module converts 8 channels of 50 Gb/s (PAM4) electrical input data to 4 channels of parallel optical signals, each capable of 100 Gb/s operation for an aggregate data rate of 400 Gb/s.

Reversely, on the receiver side, the module converts 4 channels of parallel optical signals of 100 Gb/s each channel for an aggregate data rate of 400 Gb/s into 8 channels of 50 Gb/s (PAM4) electrical output data.

An optical fiber cable with an MTP/MPO-12 connector can be plugged into the module receptacle. Proper alignment is ensured by the guide pins inside the receptacle. The cable usually cannot be twisted for proper channel to channel alignment. Electrical connection is achieved through a QSFP-DD MSA-compliant edge type connector.

The product is designed with form factor, optical/electrical connection and digital diagnostic interface according to the QSFP-DD Multi-Source Agreement (MSA) Type 2. It has been designed to meet the harshest external operating conditions including temperature, humidity and EMI interference.

Absolute Maximum Ratings

Parameter	Symbol	Min	Max	Unit
Storage Temperature	T _S	-40	85	°C
Operating Case Temperature	T _{OP}	0	70	°C
Relative Humidity (non-condensation)	RH	0	85	%
Damage Threshold, each Lane	TH _d	5.5		dBm
Supply Voltage	V _{CC}	-0.5	3.6	V

It has to be noted that the operation in excess of any individual absolute maximum ratings might cause permanent damage to this module.

Recommended Operating Conditions

Notes:

1. Average launch power, each lane (min) is informative and not the principal indicator of signal strength. A transmitter with launch power below this value cannot be compliant; however, a value above this does not ensure compliance.
2. Even if the TDECQ < 1.4 dB for an extinction ratio of ≥ 4.5 dB or TDECQ < 1.3 dB for an extinction ratio of < 4.5 dB, the OMA_{outer} (min) must exceed the minimum value specified here.
3. C_{eq} is a coefficient defined in IEEE Std 802.3-2018 clause 121.8.5.3 which accounts for reference equalizer noise enhancement.
4. Average receive power, each lane (min) is informative and not the principal indicator of signal strength. A received power below this value cannot be compliant; however, a value above this does not ensure compliance.
5. The receiver shall be able to tolerate, without damage, continuous exposure to a modulated optical input signal having this power level on one lane. The receiver does not have to operate correctly at this input power.
6. Receiver sensitivity (OMA_{outer}) is informative and is defined for a transmitter with a value of SECQ up to 3.4 dB. Receiver sensitivity should meet Equation (1)

$$RS = \max(-6.1, SECQ - 7.5) \text{ dBm} \quad (1)$$

Where:

RS is the receiver sensitivity, and

SECQ is the SECQ of the transmitter used to measure the receiver sensitivity.

7. Measured with conformance test signal at TP3 for the BER equal to 2.4×10^{-4} .
8. These test conditions are for measuring stressed receiver sensitivity. They are not characteristics of the receiver. These test conditions are for measuring stressed receiver sensitivity. They are not characteristics of the receiver.
